Global Sensors; General Conflict-Resolution Protocol; The Right Knee; Soulection #324 ft. Sonder

0.1 Notes for the next ceremony

1. Choose and launder clothes beforehand
2. Send out formal invites to guests a month beforehand

0.2 Mouse Droppings

How can I store plates and cutlery in the kitchen so mice can't shit all over them? Currently we have to rinse all cutlery before use because mice are using our drawers as a thoroughfare.

0.3 Global Sensors

I need sensors around the globe. My view of the world can be easily distorted if I have correlated sensors.

1.1 General Conflict-Resolution Protocol

Hey all,

Anyone know of situations (even highly restrictive ones) under which a group of people can ALWAYS resolve their conflicts without any of the participants even indirectly coming to physical harm?

1.2 Did Today

1. Drafted a bit of new Global Challenges Abstract
2. Solved a relatively simple Quant Trading interview question

2.1 Reasons humans don't kill other humans

- Laws against killing
- We don't kill our relatives, even if we don't like them
- We don't kill people we love/like

- Taboos against killing
- We don't kill kids
- Humans, and their allies, fight back when endangered

2.2 Peace Pill

Friend 9960 suggested a Peace Pill to help people resolve conflicts without killing each other.

3.1 Friend 6795

Friend 6795 is so diligent.

3.2 Compatibility Testing

FYI never imply that you're "testing" a woman that you're seeing. Bad associations e.g. that you're going down a list of babes seeing who'll pass the test. Doesn't make her feel special at all.

4.1 The Right Knee

Did I mention that my right knee is healed? It has full range of motion without any pain.

Now to get my left shoulder pain free...

4.2 Freezing in the Rain

I feel cold all the time. Right now it's raining outside and I'm wearing a singlet, inner shirt, and a hoodie.

Fuck. Marriage is hard. Even if your spouse is acting unacceptably, you gotta accept it.

6.1 Soulection #324 ft. Sonder

A really strange show...
29:00

7.1 Brogue

I've started playing a Rogue-like called Brogue.

Use seed 152,419,735. It has lots of special weapons early on.

7.2 Did

What *did* I do?

1. Came up with visualization of Earth (and moon)
2. Started on my 100 times table
3. Noticed that the world is getting better (see UN resolution on nukes)
4. I fought in a civil manner with Friend 9960
5. I read "The Great Man Paradox"

And I haven't been walking much anymore, spending most of my time indoors sitting or lying down.

9.1 Free Writing

I think I like the Mummy because all the characters are competent.

People wear briefs so their boners don't show. It's a chastity belt of sorts :)

So having dances, as in Victorian times, was a way of keeping people's sexuality in check by giving them an outlet to touch members of the opposite sex in public.

No one lied in The Mummy. Everything happened for a reason.

Tell the story of codpiece-land

Series of books starting with "You can't run from your baggage but you can hide it..." and with the first story being about someone who tried to outrun his baggage and later on found it inside his stomach.

I enjoy Shared Simulation Navigation

Perhaps give Friend 1651 money to record a track.

Run contests to see who can say the most in one page of wordless images. Yes, rebuses are allowed.

Igbo people are proud i.e. there are lots of things that they wouldn't do even if you paid them.

If I ever want to prove my l33tness, I should go through a complete MIT major's worth of knowledge. We can rate people based on how quickly they can complete it compared to me.

What would the world look like if people only talked when they were in danger?

Radio stations should shell out for short codes. Short codes make calling in to report things (e.g. traffic conditions) much easier.

In one land, before welcoming anyone into your house, they must answer a challenge question such that, if they answered truthfully, it implies that they agree with your rules for entering the house. Have at least three challenge questions in case someone makes a mistake in answering one of them.

Character set of Galaktika: all 128 of the letters in Knuth's ASCII table for implementations on systems with large character sets (TEXBook, Appendix C, p. 369).

Prediction: if I start now, I can receive an annual paycheck from my employer for \$1,000,000 by 24 Feb 2023.

I need to be able to answer every quant interview question instantly, even if it is only expressing it in a form which I could type straight into a suitable calculator.

My calculator should use only the keys on a US ASCII 105-key keyboard e.g. the Das Keyboard 4 Professional. The 105 keys can be remapped to form the entire TEXcharacter set.

Having complex conversations with non-rationalists is *painfully* slow.

Have tick marks on graphical clocks for 10ths and 16ths of a day.

Make a day of the decaday where I'll have anyone's time in the world who asks for it.
